PREFACE	v
About the Author	vi
CONTENTS	vii

INTRODUCTION – Sorption and Biosorption Share the Methodology	1
1. POTENTIAL OF BIOSORPTION	5
1.1 METALS: ENVIRONMENTAL THREAT	5
1.2 BIOSORPTION TECHNOLOGY	7
1.3 BIOSORPTION ENTERPRISE	9
<i>Techno-Economic Basis</i>	11
<i>Identification of Potential Synergies and Partners</i>	11
1.4 CONCLUSION	12
2. BIOSORPTION R&D	13
2.1 Biomass Screening – where to look and why ?	14
<i>What are Biosorbents ?</i>	16
<i>Biosorption Performance</i>	17
<i>Biosorbent Metal Selectivity</i>	18
Review of Biosorption Performance	19
REFERENCES	23
2.2 Adsorption - Uptake	25
2.3 Desorption	27
2.4 Mechanism of metal biosorption	29
2.5 Modeling	30
2.6 Granulation	31
<i>Biosorption Process operation</i>	32
2.7 Project disciplines and Tasks	33
3. THE MECHANISM OF METAL BIOSORPTION	35
3.1 BIOSORPTION AND BIOACCUMULATION	35
3.2 CHEMICAL BINDING	36
Complexation, Coordination, Chelation of Metals	36
Ion Exchange, Adsorption	39
Inorganic Microprecipitation	40
3.3 THE MECHANISM OF BIOSORPTION	41
Temperature Effect	41
Influence of pH	42
Ionic Strength Effect	43
Presence of Other Anions	43
Overall Mechanisms: Ion Exchange, Adsorption, Microprecipitation	44
Contribution of Electrostatic Attraction and Complexation	45
Binding Sites	46

3.4 INSTRUMENTAL ANALYSES	48
FTIR Analysis – Cation Deposition	49
FTIR Analysis – Anion Deposition	52
<i>Chromate Biosorption</i>	52
<i>Vanadate Biosorption</i>	53
<i>Gold-Cyanide Biosorption</i>	54
Determination of Electrostatic Attraction	54
Combination Mechanisms	54
3.5 REFERENCES	57-58
4. METALS IN BIOSORPTION	59
4.1 THE CHOICE OF METALS	59
4.1-1 Removal of Toxic Heavy Metals	60
<i>“The Big Three”</i>	60
<i>Second-Tier Toxic Heavies</i>	60
<i>Radionuclides</i>	60
4.2 INDUSTRIAL ENVIRONMENTAL THREATS	61
4.2-1 Electroplating Operations	61
4.2-2 Mining Industry Effluents	63
<i>Acid Mine Drainage</i>	63
4.2-3 Power-Generating Stations	65
4.3 RECOVERY OF METALS	67
4.3-1 Precious Metals	67
4.3-2 Strategic Metals	67
4.3-3 Rare Earth Elements	68
<i>Chemical Properties of REE</i>	69
4.3-4 Metal Removal/Recovery Priorities	71
4.4 METAL BEHAVIOR IN SOLUTION	72
4.4-1 Chromate in Solution	73
4.4-2 Vanadate in Solution	73
4.4-3 Gold-Cyanide in Solution	74
4.4-4 Example of Uranium speciation in solution	75
4.4-5 MINEQL+	78
4.5 REFERENCES	80
5. SORPTION BY BIOMASS	81
5.1 BIOMASS TYPES	81
5.1-1 References	83-84
5.2 SORPTION BY CHITINOUS BIOMASS	85
5.2-1 Properties and Composition of Crab Shells	85
5.2-2 Main Biomolecules in Crab Shells	86
<i>Chitin</i>	86
<i>Protein</i>	87
Chitin-Protein Complex	87
5.3 BIOSORPTION BY ALGAL BIOMASS	88
5.3-1 Seaweed Cell walls	89
5.3-2 Main Biomolecules in Seaweeds	91
<i>Cellulose</i>	91
<i>Alginate Acid</i>	92
<i>Fucoidan</i>	93

5.3-3 Sulfated Galactans of Red Algae	93
<i>Agar</i>	93
<i>Porphyran</i>	94
<i>Carrageenan</i>	94
5.3-4 The mechanism of biosorption by marine algae	94
<i>Importance of ion exchange</i>	
<i>Relevance of complexation and electrostatic attraction</i>	95
5.4 SORPTION BY MICROBIAL BIOMASS	95
5.4-1 Biosorption by Bacteria	95
5.4-2 Biosorption by Fungi	97
5.5 REFERENCES	100-102

6. EQUILIBRIUM BIOSORPTION PERFORMANCE 103

6.1 SORPTION EQUILIBRIUM 103	
6.1-1 Single-Sorbate Isotherms	105
<i>Simple Sorption Models</i>	105
<i>Langmuir model</i>	105
<i>Freundlich model</i>	106
<i>Other sorption isotherm relationships</i>	107
6.1-2 Comparison of Sorption Performance	108
6.1-3 Equilibrium Constants	110
6.1-4 Experimental Sorption Isotherm	112
<i>The tea-bag experiment</i>	114
<i>Sorbent Comparison Based on % Removal</i>	114
6.1-5 REFERENCES	116
6.1-6 Ion Exchange Isotherms and Separation Factors	117
<i>Ion Exchange Equilibrium Relationships</i>	118
<i>Example of Biosorbent Ion Exchange</i>	120
REFERENCES	120
6.2 MULTI-SORBATE SORPTION EQUILIBRIUM (3-D) 121	
6.2-1 Sorption Isotherms with a Parameter	121
6.2-2 Sorption Isotherm Plots	123
6.2-3 Cutting of Sorption Isotherm	123
6.2-4 Example of the Fe-Cd Sorption System	125
6.2-5 BIBLIOGRAPHY	126
6.3 MODELING OF EQUILIBRIUM BIOSORPTION 127	
6.3-1 Types of Sorption Models	129
<i>Models Considering Ideality</i>	130
6.3-2 Sorption Reactions and Modeling	132
<i>Multi-Component Langmuirian Models</i>	133
<i>Symbols</i>	134
Langmuirian Models with Equilibrium Constants	135
<i>Considering also the electrostatic binding</i>	136
<i>Considering the effect of pH</i>	137
Models Considering Non-Ideality	138
i) In the Liquid Phase Only	138

ii) In the Solid Phase	139
<i>Surface Complex Model</i>	139
<i>Donnan Model</i>	140
<i>Wilson Model for Ion Exchange</i>	140
6.3-3 Two Binding Sites	142
6.3-4 Considering the effect of Ionic Strength: Donnan Model	144
<i>Incorporating sorption particle swelling</i>	145
6.3-5 Combination of the Isotherm and Donnan Models	146
<i>Calculation Without Iterations</i>	146
6.3-6 Summary	148
6.3-7 REFERENCES	149-150
6.4 EQUILIBRIUM MODEL WITH SOLUTION CHEMISTRY	151
6.4-1 HIEM model for Uranium Biosorption Isotherm	151
6.4-2 Determination of HIEM model parameters and modeling of experimental data	159
6.4-3 Comparison of experimental uranium isotherms and HIEM calculations at different solution pH values	162
6.4-5 Summary	163
6.4-6 REFERENCES	164
6.5 BIOSORPTION BATCH DYNAMICS	165
6.5-1 End-Point Titration Curves	166
6.5-2 Eliminating External Mass Transfer	166
6.5-3 Biosorbent Particle Size and Sorption Rate	167
6.5-4 Rate of Uptake and Proton Release	169
6.5-5 Mass Transfer Model for Biosorption Rate	170
6.5-6 Numerical Solution of the Model Equations	172
6.5-7 Regression of Model Parameters	174
6.5-8 Desorption Rate	176
6.5-9 REFERENCES	178
7. BIOSORPTION PROCESS PRINCIPLES	179
CONTINUOUS-FLOW REACTOR/CONTACTOR SYSTEMS	179
7.1 The Fixed-Bed Column Sorption System	180
7.2 The Fluidized Bed Column Sorption System	181
7.3 The Completely Mixed Solid-Liquid Sorption System	181
7.4 Fundamental Aspects of the Continuous-Flow Fixed-Bed Column	183
<i>The Breakthrough Curve and its Interpretation</i>	183
<i>The link between equilibrium and column breakthrough</i>	184
<i>Ion Exchange with Mixed Sorbates</i>	185
<i>Sorption Process Optimization Challenge</i>	186
7.5 Process Example	187
<i>Specifications</i>	187
<i>Mass Balances</i>	188
<i>Sizing</i>	189
8. MODELING OF COLUMN PERFORMANCE	191
8.1 REVIEW: CFFB Sorption Column Performance Modeling	191
REFERENCES	196

8.2 (ECM) EQUILIBRIUM COLUMN MODEL	197
<i>Symbols</i>	198
<i>Equilibrium Considerations</i>	198
<i>Defining Characteristics of the ECM</i>	199
8.2-1 Basic concepts of ECM and symbol conventions	199
<i>ECM Equations for Transitions</i>	201
8.2-2 Calculation of Concentration Histories for Column Effluent	203
<i>Effects of Competitive Ion Exchange on the Performance</i> <i>of sorption Columns</i>	203
8.2-3 Case Study	204
<i>a) Theory of overshoots in ternary systems</i>	204
<i>b) Agreement between overshoots predicted by the ECM</i> <i>and experiments</i>	205
<i>c) Assessment of overshoots in a biosorption process removing</i> <i>Cu from wastewater containing traces of Cd or Zn</i>	207
<i>The Use of ECM to Determine the Elution Order of Metals</i> <i>and the Column Service Time for Multi-Metal Mixtures</i>	208
8.2-4 Conclusions on the ECM Concept	210
8.2-5 REFERENCES	212
8.3 (MTM) COLUMN SORPTION MODEL WITH MASS TRANSFER	213
<i>Symbols</i>	214
8.3-1 Connection between Equilibrium and Dynamic Sorption	215
<i>Start with Equilibrium Considerations</i>	215
8.3-2 Fitting the Equilibrium Model and Ion Exchange Isotherms	219
8.3-3 Fitting and Use of the Sorption Column Model	219
8.3-4 Example of the MTM Use	220
8.3-5 Conclusions on the MTM concept	221
8.3-6 REFERENCES	222
8.4 DERIVATION OF MASS TRANSFER MODEL FOR SORPTION COLUMNS	223
8.4-1 Axial Dispersion – Experimental Evaluation	223
8.4-2 Model Derivation	224
8.4-3 Numerical Solution of the Model Equations	227
8.4-4 Determination of Model Parameters and Data Modeling	229
8.4-5 REFERENCES	232
9. BIOSORBENT MATERIAL PREPARATION	233
9.1 Biomass Sources	233
<i>Industrial Biomass</i>	234
<i>Seaweeds</i>	234
9.2 Characterization of Biosorbent Particles	235
<i>Particle Size</i>	235
<i>Particle Shape</i>	236
<i>Porosity</i>	236
<i>Mechanical Strength</i>	237
<i>Density and Swelling</i>	237

9.3 Biosorbent Material Formulation	238
9.3-1 Biomass Reinforcement	238
9.3-2 Crosslinking Procedures	240
<i>Formaldehyde and Urea Formaldehyde Crosslinking</i>	242
<i>Experimental Crosslinking Examples</i>	243
9.3-3 Granulation Techniques	244
<i>Extrusion</i>	244
<i>Fluidized Bed Granulation</i>	244
<i>Spray Drying</i>	245
9.4 Column Pressure Drop	246
9.5 Conclusion to Processing	247
9.6 Desorption	248
9.6-1 Choice of Ionic Form of Sorbent	250
9.6-2 Pre-treatment of <i>Sargassum</i> biomass	251
<i>Leaching of organic material and active sites</i>	251
<i>Biosorbent Stability and Metal Affinities</i>	252
9.7 REFERENCES	253-254
10. MONOCLONAL ANTIBODIES BIOSORPTION	255
10.1 ‘Silver Bullet’ Biosorption	255
10.2 Production of Monoclonal Antibodies	257
<i>In vitro</i> Production Methods	259
10.3 Purification and Application of mAbs	260
Ion Exchange Chromatography	261
Hydrophobic Interaction Chromatography	261
Gel Filtration Chromatography	262
Affinity Chromatography	262
Large Scale Purification	265
10.4 The Future: Monoclonal vs. Single Domain Antibodies	267
10.5 Summary of mAbs Work Cited (<i>Table 10-3</i>)	268
10.6 REFERENCES	270-273
11. BIOSORPTION PUBLICATIONS – McGill University Research Group	275
12. APPENDICES	279
Appendix A – Matlab Code for HIEM Model	279
Appendix B – Fortran Code for Galerkin Finite Element Method	281
Appendix C – Fortran Code for Orthogonal Collocation Method	285
Appendix D – Matlab Subroutines for Column Concentration Profiles	293-299
13. LIST OF FIGURES and TABLES	301-312
